Recommendations.....	6
Conclusions.....	6
Bugs .....	7

## **Purpose**

This document presents the software test report I prepared for the "מוצצים" Web App. This report details the tests conducted on the platform, including rigorous evaluations of functionality, usability and performers . The goal is to improve the user experience on the Web App.

## **Application Overview**

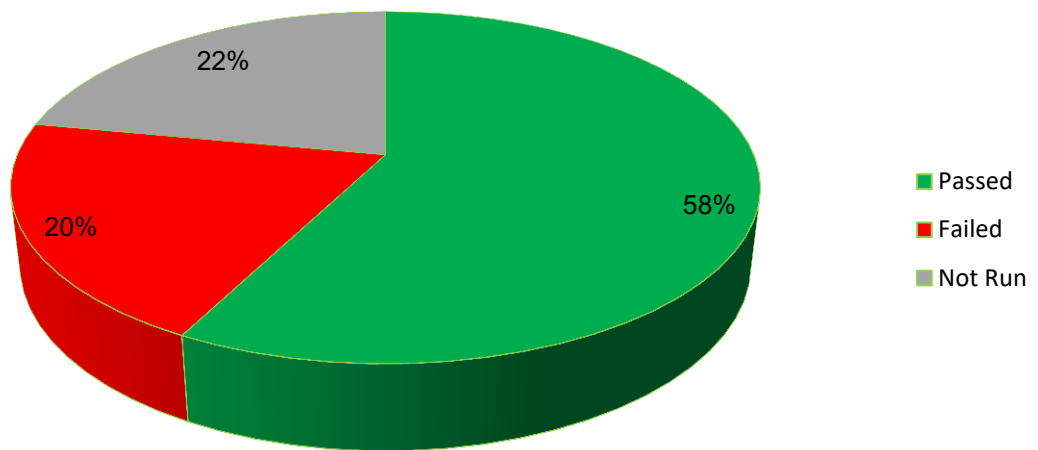

The web application "מוצצים" offers a convenient and friendly platform for customers to buy baby products such as strollers, car seats, bedrooms and more. You can come independently and buy in the various stores or place an order and order products through the app. In addition, there is the option of scheduling a consultation meeting for the design of children's rooms, safety seats, and more.

## Metrics

### Test Cases – Status

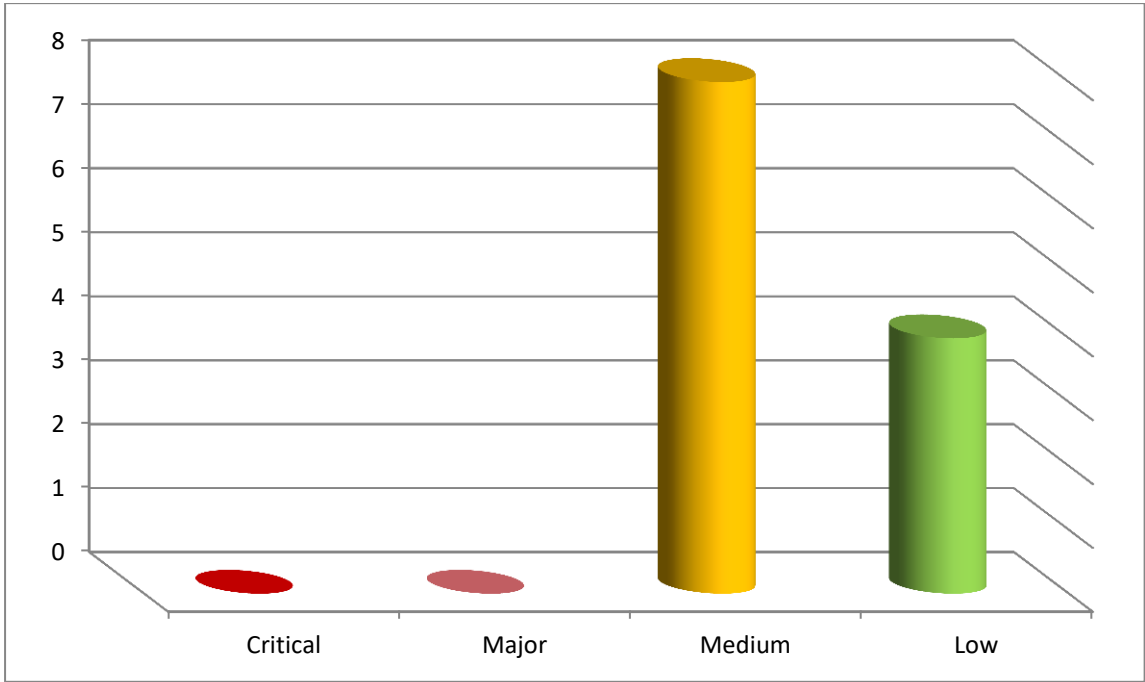

Passed	Failed	Not Run	Total
34	12	13	59

### Test Cases - Status

Severity Status

Critical	Major	Medium	Low	Total
0	0	8	4	12

## **Recommendations**

- The theme of the design should be checked and refreshed. For example, check that there is no text cut on the pages.
- I would recommend giving up useless options like the option to give product reviews.
- The bugs must be fixed to ensure that the application works clearly and comfortably in "rotation" mode .
- It is very important to allow access to the personal user account through the main page.
- I recommend going through all the links and making sure they bring me to the right page

## **Conclusions**

Although there are some bugs on the site. Some of them are of low severity and some of them are medium, the site does what it needs to do, gives me all the necessary information and the possibility to purchase products required for toddlers. I recommend letting the site work and fix the bugs in the next version.

## Bugs

[BABYSHOP-12] <a href="#">An unnecessary option for finding stores</a> Created: 08/Oct/23 Updated: 08/Oct/23	
<b>Status:</b>	To Do
